B300 SA	2.4	55	Diagonal	1.5-10					40	5	11-09	

· Guide to the use of adhesives

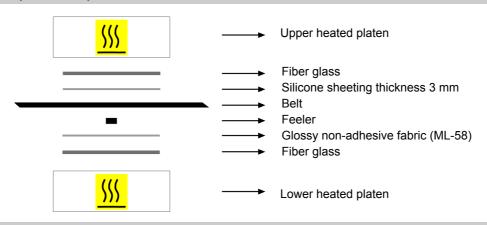

Apply the **K cement** on the polyamide part of the splices.

Let dry for 5 minutes, then match the belt ends, paying attention to align properly.

Press according to the instructions shown.

To ensure best joint life it is advisable not to run or tension the belt for 24 hours.

· Layout of components

Press settings					
Upper platen temperature	130 °C				
Lower platen temperature	130 °C				
Curing time in press	20 min.				
Driving torque	30 N/m				
Cooling time:					

Cooling time: it is recommended to remove the belt from the press once a temperature of 60/70 degrees C is reached.

Notes

Check the set temperature by means of a feeler ensuring 120 ± 5°C is reached on the platen that is in contact with the lower side of the belt.

Note: the feeler must be placed on a fill-in piece and not on the product joint (the procedure of checking the temperatures must be carried out and re-checked at least once a week.
