Humidity influence		yes		
Permanent antistati (UNI EN ISO 21179	yes			
Both sides can be u	yes			

# SUITABLE FOR

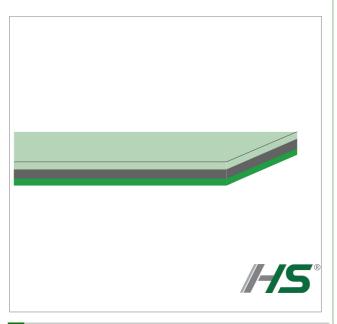

Textile: tangential drives

Materials handling: multiple drives

Materials handling: live roller drives

Paper industry

Wood industry

#### FEATURES

- Resistance to abrasion
- Resistance to heat
- Resistance to oils and fats
- Flexibility
- Low energy absorption
- Coefficient of friction stable in time

### COMPLIANCES

REACH EC 1907/2006 Regulation and Amendments

#### NOTES

The value indicated in the "Pull for 1% elongation" field refers to the relaxed K value.

#### · Guide to the use of adhesives

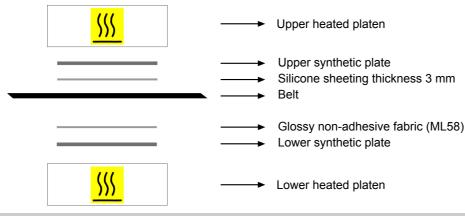

Apply the **K cement** on the polyamide part of the splices. Apply the **H primer** on the four elastomer parts of the two splices and the **B cement** on the two elastomer parts of a single splice.

Let dry for 5 minutes, then match the belt ends, paying attention to align properly.

Press according to the instructions shown.

To ensure best joint life it is advisable not to run or tension the belt for 24 hours.

### · Layout of components

Press settings					
Upper platen temperature	125 °C				
Lower platen temperature	125 °C				
Curing time in press	30 min.				
Driving torque	30 N/m				
Cooling time:					

ti is recommended to remove the belt from the press once a temperature of 60/70 degrees C is reached.

#### Notes

Check the set temperature by means of a **feeler** ensuring  $120 \pm 5^{\circ}$ C is reached on the platen that is in contact with the lower side of the belt.

**Note**: the feeler must be placed on a fill-in piece and not on the product joint. The procedure of checking the temperatures must be carried out and re-checked at least once a week.
